

SEAMOBILE SUBMERSIBLE'S OPTIONS & PERIPHERALS PRICE LIST

Pricing valid for 60 days

Note: ABS classification costs are not included in the following pricings and would be charged separately if classification were sought.

Note: The following pricing is based on SEAmagine's defined standard configuration and installation. Customization or installation of client defined equipment will be priced on a case by case basis.

1. MANIPULATORS

Single Manipulator Standard System: US\$ 50,000 to \$90,000

The SEAmobile can be fitted with almost any manipulator type available on the market today whether they are electric or hydraulic. More than one manipulator can be accommodated if necessary. The ability of the occupants to see directly underneath them allows for an excellent field of view of the manipulators and their working area.

2. UNDERWATER LIGHTING

Standard System: US\$ 15,000

The underwater lighting option consists of four HID lights each with their own ON/Off switch

3. UNDERWATER NAVIGATION SYSTEM

Standard System: US\$ 50,000

The central navigation system is based on an acoustic 3-D bottom track with water-referenced vehicle velocity, altitude, and heading. The initial GPS coordinate is entered on surface and used as the reference point. Navigational data is presented on the computer monitor.

4. INDEPENDENT SURFACE TRACKING SYSTEM

Standard System: US\$ 22,000

Acoustic positioning transceiver allows for underwater tracking of the submersible from topside control. Larger systems available that will interface with surface ship navigational equipment.

5. INDEPENDENT EXTERNAL PAN & TILT SYSTEM

Standard System: US\$ 12,000

Pan and Tilt system with spare thru-hull penetrators. This system allows operator to mount either lights or video camera on it and have it moveable by occupants in cabin.
